

How to use a fentanyl test strip

1 Add 1/2 a shot glass of water* (15mL) to your empty baggie or just prepped cooker or a small container containing a small amount of the powder** you are testing—about the size of a match head or a half a grain of rice.

*If you are testing a stimulant (i.e. meth, cocaine, or MDMA) use a full shot glass of water.

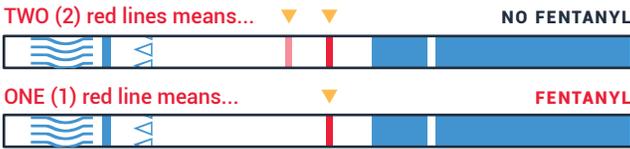

**If you want to test something that isn't a powder, crush it first.

2 Dip the test strip in the water mixture up to the 1st line and hold for 15 seconds. You will know its ready because the water will be sucked up into the white part of the strip.

3 Take the strip out of the water mixture and place it in a sterile surface. Wait 60 seconds.

4 Look at the strip. Even very light red lines count.

No drug is completely safe. Make sure someone is with you who can give naloxone (Narcan) or call for help if you need it.
